

DevOps Practice

(aka Agile Software Practice)

BSc (H) Software Systems Development – Year 4

BSc (H) Software Systems Practice – Year 4

Diarmuid O Connor (doconnor@wit.ie)

Student Info.

- Moodle:
 - Used for assignment submissions only.
- Website:
 - URL: <https://tutors.dev/course/devops-practice-setu-deise>
 - All course material.
- Communications.
 - Slack workspace.
 - Emails to @mail.wit.ie accounts.
- Contact hours: 1L (Online) + 3P
 - Emphasis on Practical skills.

Agenda

- Software requirements
- The Software Development Lifecycle (SDLC)
- Module's focus
- Assessment.

A terminal window screenshot showing a user named 'diarmuidoconnor' running two commands. The first command is 'aws --version', which outputs 'aws-cli/2.2.28 Python/3.8.8 Darwin/19.6.0 exe/x86_64 prompt/off'. The second command is 'node -v', which outputs 'v18.13.0'. The terminal has a dark background with orange and blue accents. At the bottom, there is a status bar showing 'φ You, 1 second ago Ln 44, Col 9 Spaces: 2 UTF-8 LF { }'.

```
diarmuidoconnor ~$ aws --version
aws-cli/2.2.28 Python/3.8.8 Darwin/19.6.0 exe/x86_64 prompt/off
diarmuidoconnor ~$ node -v
v18.13.0
diarmuidoconnor ~$
```

φ You, 1 second ago Ln 44, Col 9 Spaces: 2 UTF-8 LF { }

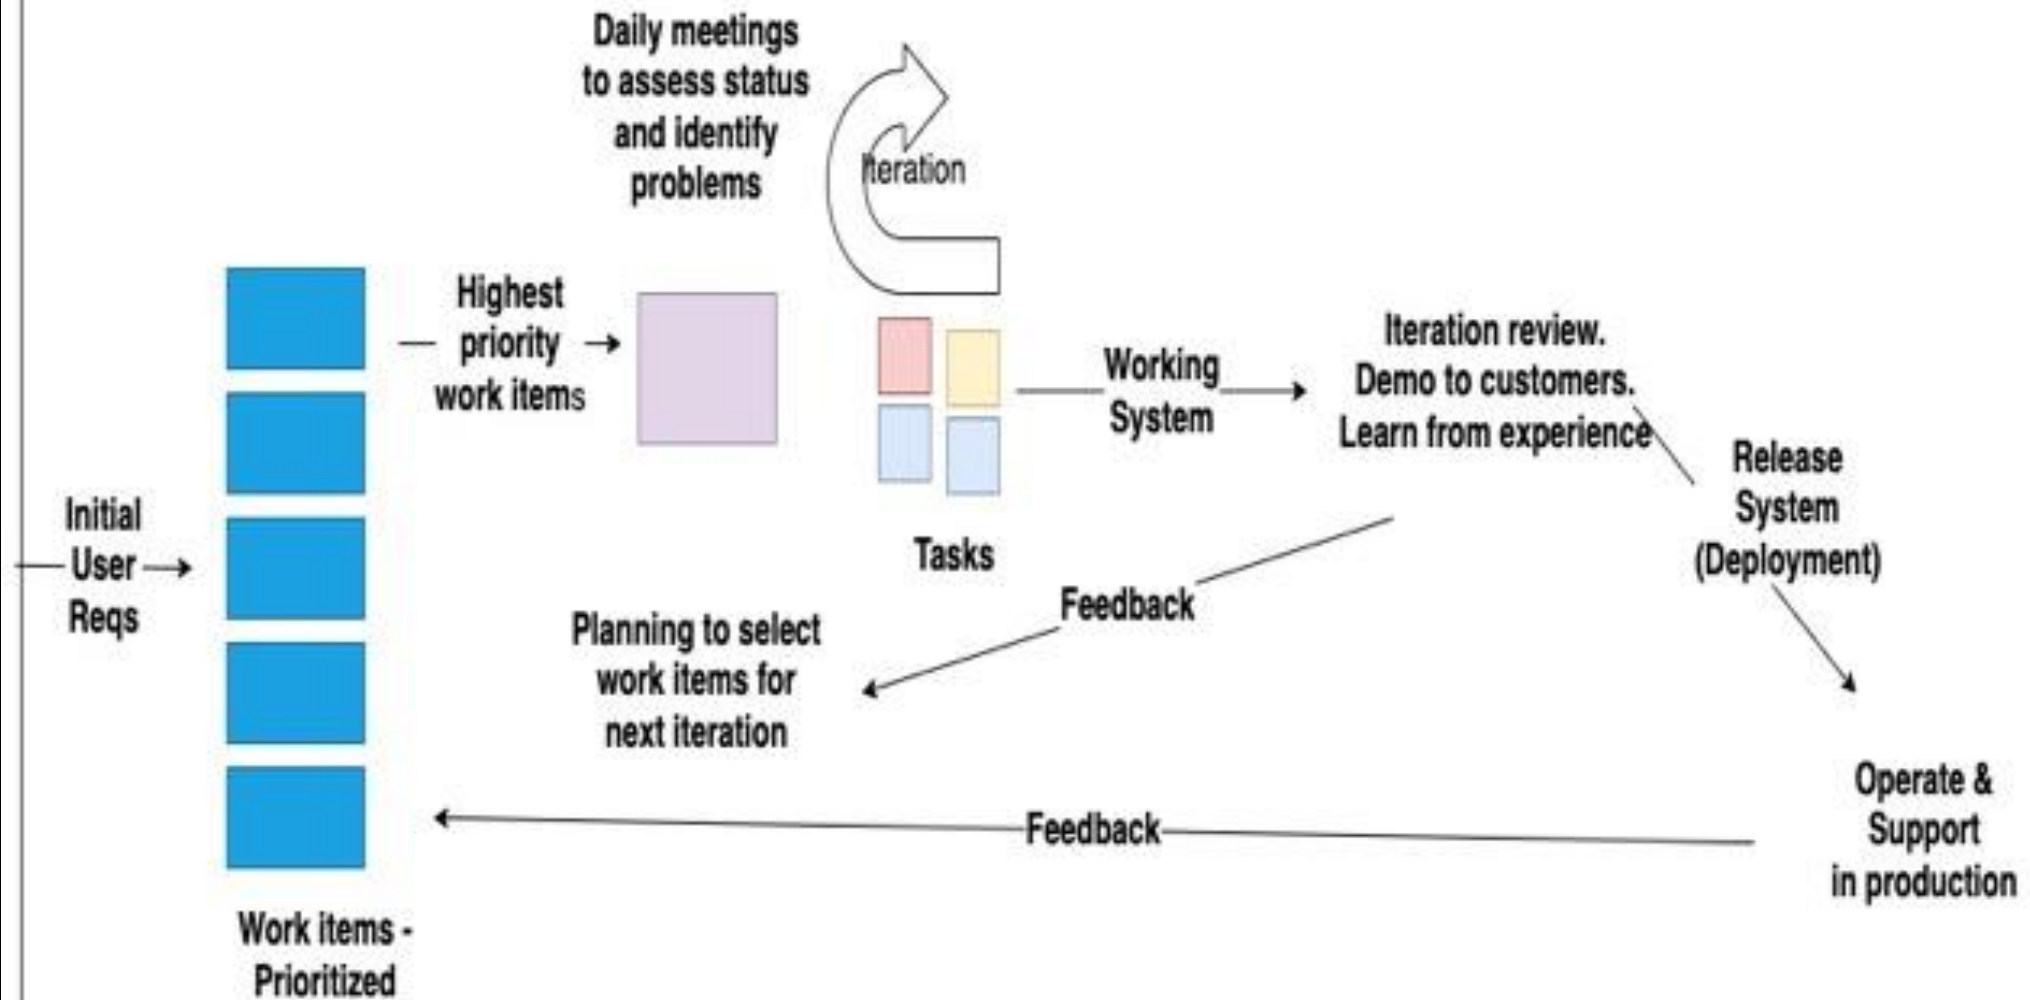

Software requirements

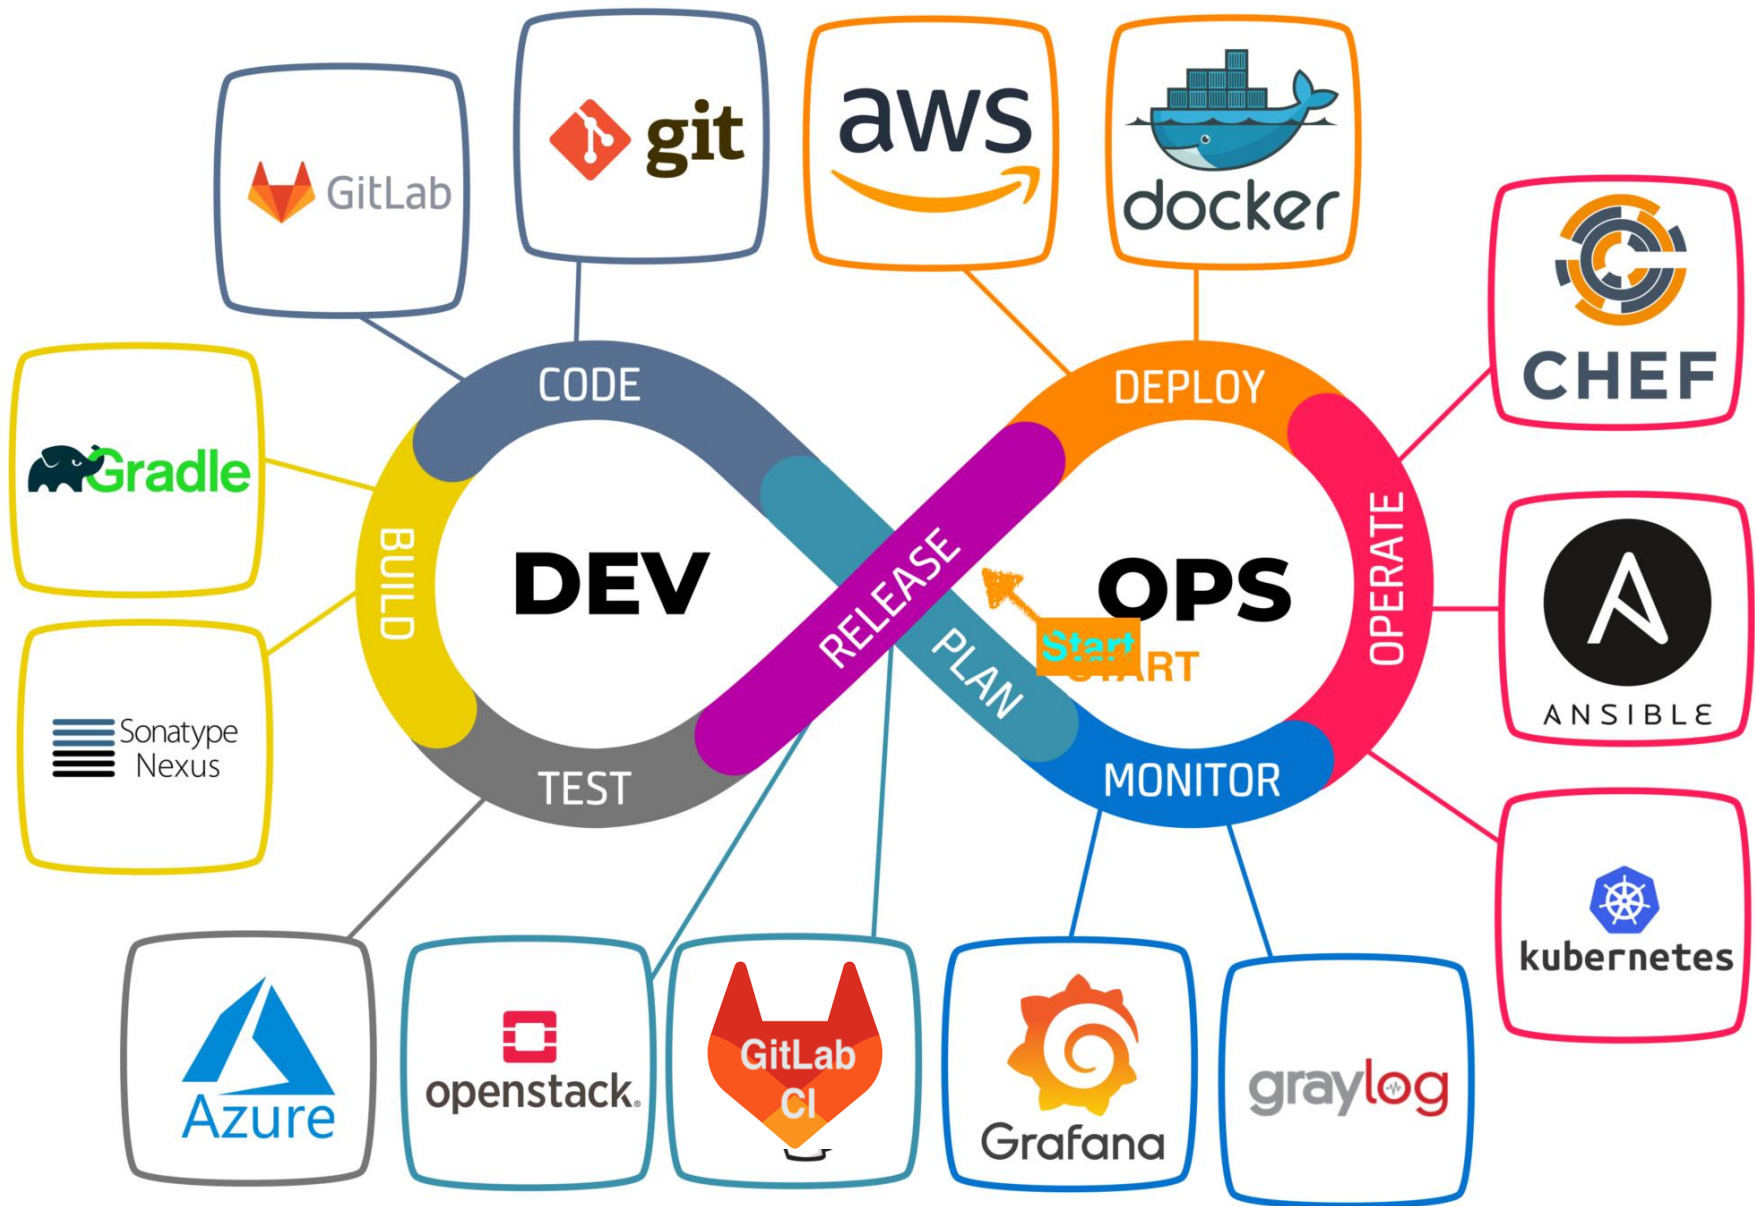

- Node.js - Locally; ~v20.x; See <https://nodejs.org/en/download/>
- Docker Desktop – Locally; See <https://www.docker.com/get-started/>
- The Git tool – Locally; See <https://www.atlassian.com/git/tutorials/install-git>
 - May already be installed (\$ git --help)
- VS Code editor – Locally; See <https://code.visualstudio.com/>
- A GitHub account.
- A GitLab account – See <https://gitlab.com/>
- An AWS account – See <https://aws.amazon.com/>
- An on-premise Kubernetes cluster account (Details later)

The software development lifecycle (SDLC)

- Waterfall model.
- The Agile model.
 - An umbrella name.
 - Scrum is the most popular instantiation.
 - Matured into the DevOps model.

The Agile S/w Development lifecycle

Module's focus.

- Our focus is on the tools, platforms, and **services** to support software creation in a dynamic (i.e. agile) development environments, with particular emphasis on deployment.
- Tool chain:
 - Docker (Build, Package).
 - Kubernetes (Deployment)
 - GitLab CI (CI/CD – Test → Release → Deploy).
 - AWS (Deploy).

Assessment

- **100% CA.**
 - **10% - Lab work handup**
 - **45% - take-home assignment.**
 - **45% - end-of-semester, lab-based exam – week12/13.**
